

MULTI-TABLE BLAST MACHINE

BUILT TO BLAST

Bronco Indexing Multi-Table Blast Machines provide an ideal solution for continuous production and short cycle times. The operator loads and unloads one satellite table while another satellite table is processed. When blasting is complete, the main table indexes all four satellite tables to the next position, and the process repeats.

Bronco Indexing Multi-Table Blast Machines are built tough and designed to last, even in the most demanding environments. Our commitment is uncompromising – to manufacture long-lasting, heavy-duty blast cleaning equipment tough enough to earn the Bronco name.

Assembled in the USA

Blast Chamber Capacity

- Available in 14, 20, 24, 26, and 36-inch table diameters
- Table capacities from 100 to 500 pounds
- Multiple blast wheel configurations

Part Handling

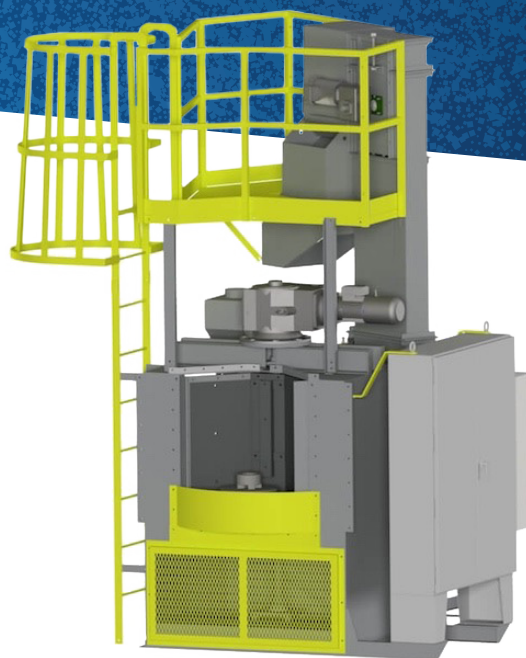

- Four Station, indexing satellite design
- Manganese tables
- Work tables rotate to ensure 100% coverage
- Table fully exposed for overhead loading/unloading

Maintenance

- Tool-free access doors and debris screens
- Replaceable cabinet liners
- Easily serviceable external spinner mechanism

Machine Controls

- Intuitive touch screen controls
- NEMA 12 enclosure
- Programmable timers and maintenance reminders

Bronco Blast Wheel

- 1/2" manganese housing
- Long life cast liners
- Multiple motor HP configurations available
- Target lock to locate control cage
- No springs, blade blocks, or pins

Material Handling

- Gravity slope directs spent media to elevator boot
- Centrifugal discharge bucket elevator with cast buckets

Options

- Customizable recipe control
- Auto-set abrasive control valve
- Full automation available for robotic system integration
- VFD blast wheel
- Automatic abrasive adder
- Rotary screen
